

A Publication of Residents Voice  
drought causes this and we have no control over  
the drought.”

Oct 2009

Volume 2 Issue 8

When entering LWV through Gate 7, you will drive by a street divider that looks like it was used as an example from the Bible. Seeds for the plants in the foreground appear to have been cast on ground with no soil whereas the plants in the distance are blooming colorfully and seem to be as healthy as we would hope for.

The top picture is a hill awaiting replacement. This is what the established plants look like. The lower picture is an adjacent hill that has been “upgraded” with new sprinklers and new plants. How many years will it take to make this hill acceptable in the eyes of the residents who drive from Gate #6 to CH #4. We will have to wait years for these plants to become as established as the replaced plants and then it is questionable if the end result will have the green or color that we expect from our landscape division.

When driving from Gate #9 to CH #5 (in the background) you will pass by a scene that makes you wonder if we have a landscaping committee at all. Bare dirt and roots provide an enticing foreground and avenue of welcome.

We certainly can't ignore the hillside as you come in thru Gate #10. How many years do the residents have to put up with this “newly” landscaped hill before it begins to look like it did before the “upgrade?”
